Curriculum Progression Map

Subject: Science

Year 5	Autumn 1	Autumn 2	Spring 1	Spring 2	Summer 1	Summer 2
Topic and investigation project	Forces <i>What force is needed to move a shoe across different surfaces?</i>	Cells and diffusion <i>How do chemicals get in and out of our cells?</i>	Earth and space <i>What would it be like to travel to another planet?</i>	Light <i>How do our shadows change during the day?</i>	Variation and evolution <i>How did Charles Darwin and Alfred Wallace make their theories of evolution?</i>	Animal body systems <i>How can we keep our hearts healthy?</i>
Skills	Take measurements, using a force meter with accuracy and precision. Take repeat readings. Record data and results using tables and bar charts.	Recording data using scientific diagrams and labels.	Report and present findings from enquiries in a diary. Identify scientific evidence that has been used to support or refute ideas.	Plan different types of scientific enquiries to answer questions, including recognising and controlling variables.	Report and present findings from enquiries in a diary. Identify scientific evidence that has been used to support or refute ideas.	Report and present findings from enquiries into heart health. Identify scientific evidence that has been used to support or refute ideas.
Knowledge	Explain that unsupported objects fall towards the Earth because of the force of gravity acting between the Earth and the falling object.	Organisms are made up of one or more cells, which have common structures that carry out life processes.	Describe the movement of the Earth and other planets relative to the sun in the solar system.	Recognise that light appears to travel in straight lines. Use the idea that light travels in straight lines to explain that objects are seen because they	Recognise that living things have changed over time and that fossils provide information about living things that	Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood.

	<p>Identify the effects of air resistance, water resistance and friction, that act between moving surfaces.</p> <p>Recognise that some mechanisms including levers, pulleys and gears allow a smaller force to have a greater effect.</p>	<p>Cells are usually too small to be seen without a microscope, but have a range of three-dimensional shapes and sizes.</p> <p>Chemical particles move through the cell cytoplasm by diffusion, and some chemical particles can enter and leave a cell by diffusing through the cell membrane.</p>	<p>Describe the movement of the moon relative to the Earth.</p> <p>Describe the sun, Earth and moon as approximately spherical bodies.</p> <p>Use the idea of the Earth's rotation to explain day and night and the apparent movement of the sun across the sky.</p>	<p>give out or reflect light into the eye.</p> <p>Explain that we see things because light travels from light sources to our eyes or from light sources to objects and then to our eyes.</p> <p>Explain why shadows have the same shape as the objects that cast them.</p>	<p>inhabited the Earth millions of years ago.</p> <p>Recognise that living things produce offspring of the same kind, but normally offspring vary and are not identical to their parents.</p> <p>Identify how animals and plants are adapted to suit their environment in different ways and that adaptation may lead to evolution.</p>	<p>Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function.</p> <p>Describe the ways in which nutrients and water are transported within animals, including humans.</p>
Key Vocabulary / reading opportunities	<p>Comprehension exercises:</p> <p>Push and pull.</p> <p>How things move.</p> <p>Sir Isaac Newton.</p>	<p>Comprehension exercises:</p> <p>Microscopes magnify things.</p> <p>Solids, liquids and gases.</p>	<p>Comprehension exercises:</p> <p>Phases of the moon.</p> <p>Galileo and his telescope.</p> <p>Why does the moon orbit Earth?</p> <p>The inner planets.</p>	<p>Comprehension exercises:</p> <p>The light spectrum.</p> <p>The scientific method.</p>	<p>Comprehension exercises:</p> <p>Adapting to survive.</p> <p>The tundra biome.</p> <p>Hide and seek.</p>	<p>Comprehension exercises:</p> <p>It circulates.</p> <p>Tissues, organs and systems.</p>
Stretch and Challenge	<p>Draw force arrows to scale on diagrams to show how forces act on an object.</p>	<p>Design a unicellular organism that performs all of the life processes.</p>	<p>The Solar System to scale.</p> <p>Comet vs. Asteroid.</p> <p>Why does the Earth spin?</p>	<p>Use simulation to find patterns in reflected rays.</p>	<p>Predicting inheritance through generations of a family tree.</p>	<p>Make a model arm to show antagonistic muscles.</p>
Links to Modern Britain	<p>Rule of law: follow standard procedures during experiments.</p>	<p>Rule of law: follow standard procedures during experiments.</p>	<p>Democracy: voting for the best scientist of all time.</p>	<p>Rule of law: follow standard procedures during experiments.</p>	<p>Respect and tolerance: embracing diversity when discussing variation amongst humans.</p>	<p>Democracy: team roles for group research and presentation.</p>
Gatsby links	<p>Tim Peake video from International Space Station.</p>	<p>Biological organisation – careers video.</p>	<p>Research historical and modern-day space scientists.</p>	<p>What is an optician? video</p>	<p>Dig in to palaeontology careers video.</p>	<p>Research the role of a dietician, GP, radiographer, nurse</p>

						and cardiologist in looking after heart health.
<p>Science lessons focus on learning towards understanding a Big Idea.</p> <p>Hinterland Knowledge is how we use activities to give the context to what the students are learning.</p>	<p>Forces make things change. Explore the idea that no force means no change – what is happening right now to Voyager spacecraft in interstellar space?</p>	<p>Organisms are made of one or more cells Use bioviewers and microscopes to observe cells. Cells need a supply of molecules to carry out life processes. Visking tubing experiment to show permeability to some chemicals and not others.</p>	<p>Understanding the uniqueness of the Earth and the vastness of space gives us perspective and awe. Use images and videos from space craft to give different perspectives on the night sky. Use recent examples from the news where possible.</p>	<p>Waves radiate information. Understanding waves helps us to communicate. Make a periscope. Experiment with reflected light. Discuss uses of mirrors and light reflection.</p>	<p>Differences between organisms cause species to evolve by natural selection of better adapted individuals. Look at fossils – why are these organisms no longer alive? The great diversity of organisms is the result of evolution. Watch natural history documentary.</p>	<p>Organisms are made of one or more cells. Use bioviewers and microscopes to observe blood, arteries and veins.</p>

Fairlands Curriculum Progression Map

Subject: Science

Year 6	Autumn 1	Autumn 2	Spring 1	Spring 2	Summer 1	Summer 2
Topic and investigation project	Reversible changes <i>How can we speed up dissolving?</i>	Electricity <i>What effect do cells have on the brightness of a bulb?</i>	Life cycles <i>How does the environment affect the germination of seeds?</i>	Irreversible changes <i>Which acids react fastest with bicarbonate of soda?</i>	Classification <i>How do invertebrates survive?</i>	Sports science <i>Do all fizzy drinks have the same amount of sugar in them?</i>
Skills	Planning different types of scientific enquiries to answer questions, including recognising and controlling variables where necessary. Using test results to make predictions to set up further comparative and fair tests.	Plan scientific enquiries to answer questions, including recognising and controlling variables. Use test results to make predictions to set up further comparative and fair tests. Record data and results using scientific diagrams and labels.	Take measurements of length volume, using rulers and measuring cylinders. Record results using tables and line graphs. Report conclusions including scientific explanations and causal relationships.	Plan scientific enquiries to answer questions, including recognising and controlling variables. Use test results to make predictions to set up further comparative and fair tests. Record data and results using scientific diagrams and labels.	Report and present findings from enquiries in a diary. Identify scientific evidence that has been used to support or refute ideas.	Plan an investigation to find out about sugar in fizzy drinks, controlling variables. Record data and results using tables and bar charts. Use results to make predictions and set up further tests. Report conclusions including scientific explanations and causal relationships. Explain the degree of trust in results.
Knowledge	Compare and group everyday materials on the basis of their properties. Know that some materials will dissolve in liquid to form a solution, and describe how to recover a substance from a solution. Use knowledge of solids, liquids and	Associate the brightness of a lamp or the volume of a buzzer with the number and voltage of cells used in the circuit. Compare and give reasons for variations in how components function, including the brightness of bulbs, the loudness of	Describe the differences in the life cycles of a mammal, a bird, an amphibian and an insect. Describe the life process of reproduction in some plants and animals. Describe the changes as humans develop to old age, including the	Explain that some changes result in the formation of new materials, and that this kind of change is not usually reversible, including changes associated with burning and the action of acid on bicarbonate of soda.	Describe how living things are classified into broad groups according to common observable characteristics and based on similarities and differences, including microorganisms, plants and animals. Give reasons for classifying plants and	Recognise the impact of diet, exercise, drugs and lifestyle on the way our bodies function.

	gases to decide how mixtures might be separated, including through filtering, sieving and evaporating. Give reasons for the uses of everyday materials. Demonstrate that dissolving, mixing and changes of state are reversible changes.	buzzers and the on/off position of switches. Use recognised symbols when representing a simple circuit in a diagram.	changes experienced in puberty.		animals based on specific characteristics.	
Key Vocabulary/reading opportunities	Comprehension exercises: The water cycle. Measuring temperature. Solids, liquids and gases.	Comprehension exercise: Electricity.	Comprehension exercise: Plant life cycles.	Read instructions for experiments.	Read about invertebrates to research their characteristics.	Read about the ingredients and purpose of sports drinks.
Stretch and Challenge	Particle arrangements in solids, liquids and gases. Mixtures – which states are in each mixture?	How are lights arranged in a house compared to a set of Christmas tree lights?	Reproductive strategies comprehension.	How can you make different concentrations of acid?	Research different sub-groups of arthropods.	Research into sugary fizzy drinks and respiration.
Links to Modern Britain	Rule of law: follow standard procedures during experiments, following lab safety rules.	Democracy: joint decision making to solve circuit problems.	Democracy: team roles in group research.	Rule of law: follow standard procedures during experiments, following lab safety rules.	Democracy: students identify questions to ask each other about their research into invertebrates.	Democracy: team roles when carrying out experiments.
Gatsby links	How to make filthy water drinkable: TED talk.	Science, why bother? Electricity video.	Research the careers of naturalists such as David Attenborough and Jane Goodall.	Research chemists such as Spencer Silver, Ruth Benerito and Jamie Garcia.	Use Marine Biologist fact file to write job application letter.	Sports and exercise scientist career video.

<p>Science lessons focus on learning towards understanding a Big Idea.</p> <p>Hinterland Knowledge is how we use activities to give the context to what the students are learning.</p>	<p>Materials are either made of a single chemical substance or a mixture of substances which each have distinctive properties.</p> <p>Experiments to discover properties of materials and carry out dissolving and evaporating.</p>	<p>The everyday world uses technology made using our understanding of electrical charge.</p> <p>Experiment with circuit components to create circuits that would be found in the home, e.g. Christmas tree lights.</p>	<p>Genetic information is passed from each generation to the next, affecting the development of organisms.</p> <p>Take geranium cuttings, germinate cress seeds and observe development of chicken eggs.</p>	<p>During chemical reactions, new substances are formed.</p> <p>Students make milk plastic and rust, and observe new products during burning and when reacting acid with bicarbonate of soda.</p>	<p>The great diversity of organisms is the result of evolution.</p> <p>Use news reports about recent discoveries of new species, or extinctions of existing ones. What makes these groups so rare?</p>	<p>The health of an individual results from interactions between its body, behaviour, environment and other organisms.</p> <p>Research, plan and carry out a full investigation into the types and amount of sugar in fizzy drinks.</p>

Fairlands Curriculum Progression Map

Subject: Science

Year 7	Autumn 1	Autumn 2	Spring 1	Spring 2	Summer 1	Summer 2
Topic and investigation project	Forces and motion <i>How does force affect the extension of a spring?</i>	Particles <i>How can we identify ink from a crime scene?</i>	Space physics <i>What effect does speed have on the size of a meteorite impact crater?</i>	Reproduction and cells <i>Which seeds are dispersed the furthest from an exploding seed pod?</i>	Atoms and elements <i>What is the change in mass when magnesium burns?</i>	Digestion <i>What effect do enzymes have in biological washing powder?</i>
Skills	Make measurements and use appropriate techniques and apparatus. Draw tables and graphs. Use observations and data to draw conclusions. Evaluate the reliability of methods and Evaluate data, identifying random and systematic error.	Use simple equations and carry out appropriate calculations. Use observations to draw conclusions.	Make measurements and use appropriate techniques and apparatus. Draw tables and graphs. Use observations and data to draw conclusions. Evaluate the reliability of methods and Evaluate data, identifying random and systematic error.	Plan an investigation, identifying variables and making a prediction. Evaluate risks.	Scientific methods and theories develop with new evidence. Make measurements and use appropriate techniques and apparatus. Draw tables and graphs. Use observations and data to draw conclusions. Evaluate data.	Plan an investigation, identifying variables and making a prediction. Evaluate risks.
Knowledge	Calculating speed. Distance-time graphs. Relative motion. Pushes and pulls. Using force arrows in diagrams of balanced and unbalanced forces. Moment as the turning effect of a force. Forces associated with deforming objects, with rubbing	Properties of the states of matter and changes of state in terms of the particle model. Pure substances and mixtures. Dissolving and diffusion in terms of the particle model. How to identify pure substances. How to separate mixtures.	Calculation of weight from mass and gravitational field strength. Gravity forces on other planets and stars, and between the Earth and the moon and Sun. Stars in our galaxy and other galaxies. The effect of the Earth's tilt on seasons and day length.	Observing cells using a light microscope. Functions of cell organelles. Comparing plant and animal cells. The role of diffusion in the movement of materials in and between cells. Structural adaptations of unicellular organisms.	Structure of an atom. Differences between atoms, elements and compounds. Chemical symbols and formulae. Conservation of mass.	Components of a healthy human diet. Calculations of energy requirements. Health consequences of diet imbalances. Tissues and organs of the human digestive system. How the digestive system digests food using enzymes. What catalysts do.

	<p>between surfaces and with pushing things out of the way.</p> <p>Measuring forces in Newtons.</p> <p>Hooke's law.</p> <p>Work done and energy changes on deformation.</p> <p>Non-contact forces.</p> <p>Forces cause objects to start or stop moving or change speed.</p>		<p>The light year as a unit of astronomical distance.</p>	<p>Organisation of multicellular organisms.</p> <p>Structure and function of human reproductive systems.</p> <p>Gametes, fertilisation, gestation and birth.</p> <p>Menstrual cycle.</p> <p>Reproduction in plants.</p>		<p>The importance of bacteria in the human digestive system.</p>
<p>Key Vocabulary/reading opportunities</p>	<p>Comprehension exercise: Forces and motion.</p>	<p>Comprehension exercise: Forms of matter.</p>	<p>Comprehension exercise: What is gravity?</p>	<p>Comprehension exercise: What's in your cells?</p>	<p>Comprehension exercises: Atoms and Elements. It's Elemental.</p>	<p>Comprehension exercises: Tissues, organs and systems. Down the hatch.</p>
<p>Stretch and Challenge</p>	<p>Explain the forces acting on an object that is moving at constant speed.</p>	<p>Explain what is happening to particles during melting and boiling and relate this to temperature.</p>	<p>Explain why the angle of the Sun changes the effect of its heating.</p>	<p>Link how the amniotic fluid and placenta enable a foetus to obtain oxygen and food and maintain a constant temperature.</p>	<p>Use a symbolic chemical equation to predict and explain an apparent change of mass in an open system where a reactant or product is in the gas state.</p>	<p>Explain which foods can be absorbed using the idea of particle size.</p>

Fairlands Curriculum Progression Map

Subject: Science

Year 8	Autumn 1	Autumn 2	Spring 1	Spring 2	Summer 1	Summer 2
Topic and investigation project	Chemical reactions <i>How can acidic soil be neutralised with a base?</i>	Gas exchange and respiration <i>Which substrate gives the fastest rate of respiration in yeast?</i>	Electricity and magnetism <i>How can we make a stronger electromagnet?</i>	Earth and atmosphere <i>What effect does heating time have on weathering of desert rocks?</i>	Waves <i>Which factors affect the time that an after-image appears on the retina?</i>	Ecology <i>How do species interact in a hedgerow habitat?</i>
Skills	Make measurements and use appropriate techniques and apparatus. Draw tables and graphs. Use observations and data to draw conclusions. Evaluate the reliability of methods and Evaluate data, identifying random and systematic error.	Make measurements and use appropriate techniques and apparatus. Draw tables and graphs. Use observations and data to draw conclusions. Evaluate the reliability of methods and Evaluate data, identifying random and systematic error.	Plan an investigation, identifying variables and making a prediction. Evaluate risks.	Plan an investigation, identifying variables and making a prediction. Evaluate risks.	Consider accuracy, precision, repeatability and reproducibility. Plan an investigation, identifying variables and making a prediction. Evaluate risks. Draw tables and graphs. Use observations and data to draw conclusions. Evaluate data.	Use appropriate apparatus during fieldwork. Apply sampling techniques.
Knowledge	Chemical reactions involve the rearrangement of atoms. Using formulae and equations to represent chemical reactions. Combustion, thermal decomposition, oxidation, displacement and	Adaptations of gas exchange structures to their functions. Mechanism of breathing. Measurements of lung volume. Impact of exercise, asthma and smoking on the gas exchange system. Aerobic and anaerobic respiration in living	Electric current in series and parallel circuits. Potential difference. Resistance as the ratio of potential difference to current. Static electricity and electric fields. Magnetic poles and fields. Earth's magnetism and navigation	The composition and structure of the Earth. The rock cycle and formation of igneous, sedimentary and metamorphic rocks. The carbon cycle. The composition of the atmosphere. Limited resources and pollution.	Waves on water are transverse, can reflect, add and cancel. Sound waves are longitudinal, produced by vibrations, need a medium to travel, can reflect and be absorbed and are detected by the ear and a microphone.	The interdependence of organisms in an ecosystem. Food webs. The importance of plant reproduction through insect pollination in human food security. How organisms affect, and are affected by, their environment.

	<p>neutralisation reactions.</p> <p>Indicators and the pH scale.</p> <p>Reactions of acids with metals and alkalis.</p> <p>The role of catalysts.</p>	<p>organisms, including fermentation.</p>	<p>The magnetic effect of a current in electromagnets and motors.</p>		<p>Auditory range of humans and animals.</p> <p>The use of ultrasound.</p> <p>Light waves are transverse, can travel through a vacuum, can be absorbed, scattered and reflected.</p> <p>Use the model of light rays to explain imaging, reflection and refraction.</p> <p>Light is detected by cameras and the eye.</p> <p>Different frequencies of light are refracted, absorbed and reflected differently.</p>	<p>Bioaccumulation of toxic materials.</p>
<p>Key Vocabulary/reading opportunities</p>	<p>Writing word equations to represent the changes occurring in chemical reactions.</p>	<p>Comprehension exercises: What's in your cells? Oxygen exchange.</p>	<p>Comprehension exercises: Charge it! Magnetic attraction</p>	<p>Comprehension exercises: Atmospheric layers. Climate change.</p>	<p>Comprehension exercises: Pitch and volume. Waves and current. What causes reflections? They see with their ears.</p>	<p>Comprehension exercises: Ecology: taking care of Earth. Competing for resources. Ecosystems. Taiga ecosystems. Rainforest ecosystems. What's eating you? Reading into science: Pesticides – benefit or disaster?</p>
<p>Stretch and Challenge</p>	<p>Show how atoms rearrange during chemical reactions</p>	<p>Explain how the human circulatory, digestive and gas exchange systems</p>	<p>Use ideas about the structure of an atom to explain static</p>	<p>Link processes that add and remove carbon dioxide from the atmosphere to</p>	<p>Compare the properties of sound, light and water waves.</p>	<p>Group role play of interdependence in ecosystems.</p>

	and write symbol equations.	work together to keep cells alive.	charge, current and resistance.	understand changes in the overall levels.		
Links to Modern Britain	Rule of law: agreed ways of representing chemical reactions as word equations and symbol equations.	Rule of law: how national laws are used to promote healthy living, e.g. smoking laws.	Democracy: joint decision making to solve circuit problems in groups.	Rule of law: how do national laws and international treaties contribute to reducing carbon emissions?	Rule of law: follow standard procedures during experiments.	Individual liberty: understanding our impact on the environment and our responsibility to conserve the environment.
